

## Practical Analysis of Business Data

A 2-Day  
Module

### Is There Wood In Those Trees ?

We come across many (many) people who seem "worried" when the task is to do with manipulating numbers and handling statistics.

Often people lack confidence in analysing, presenting, and drawing conclusions from the data in their business.

This course is a non-threatening, practical, introduction to data analysis.

The course is big on explanation but small on scary equations !

Our training examples are drawn from various business environments and are meant to be relevant.

We also encourage participants to bring their own data which we can explore together.

Participants will learn many simple but useful data analysis and presentation techniques and gain the confidence to be self sufficient in such tasks.

The course requires each participant to have access to a PC with Microsoft Excel pre-installed. The PC's do not need to be networked.

This is not a course in learning Excel – we assume a basic level of knowledge of how Excel works.

Comprehensive course manuals are provided.

For more information please contact us.

### Training & Consultancy
